As building ontologies manually is extremely labor-intensive and time-consuming, there is great motivation to automate the process. Information extraction and text mining have been explored to automatically link ontologies to documents, for example in the context of the BioCreative challenges. Languages. An ontology language is a formal language used to encode an ontology. There are a number ...

The Basic Structure of the Conventional Formulation 2.1 The Lagrangian Formulation of QFT. The crucial step towards quantum field theory is in some respects analogous to the corresponding quantization in quantum mechanics, namely by imposing commutation relations, which leads to operator valued quantum fields. The starting point is the classical Lagrangian formulation of mechanics, which is a ...

Formal ontologies are theories that attempt to give precise mathematical formulations of the properties and relations of certain entities. Such theories usually propose axioms about these entities in question, spelled out in some formal language based on some system of formal logic. Formal ontology can be seen as coming in three kinds, depending on their philosophical ambition. Let's call ...

I was extremely excited by the Semantic Web back in 2003-2005 when working on a master's in Information Science. I was sure it was 5 years away, tops. I was eagerly building profile pages using FOAF and trying hard to implement other ontologies in my work. I got a job in an academic library and pushed hard for semantic technologies. Seemed like ...
