*typedef is a reserved keyword in the programming languages C and C++. It is used to create an additional name (alias) for another data type, but does not create a new type, except in the obscure case of a qualified typedef of an array type where the typedef qualifiers are transferred to the array element type. As such, it is often used to simplify the syntax of declaring complex data structures ...*

*Matthew L. Elwin, in Embedded Computing in C with the PIC32 Microcontroller, ... The central processing unit runs everything. It fetches program instructions over its “instruction side” (IS) bus, reads data over its “data side” (DS) bus, executes the instructions, and writes the results over the DS bus. The CPU can be clocked by SYSCLK at up to 80 MHz, meaning it can execute one ...*
