The compressibility factor (Z) is a useful thermodynamic property for modifying the ideal gas law to account for behavior of real gases. It is a measure of how much the thermodynamic properties of a real gas deviate from those expected of an ideal gas. It may be thought of as the ratio of the actual volume of a real gas to the volume predicted by the ideal gas at the same temperature and ...

For years, my self-education was stupid and wasteful. I learned by consuming blog posts, Wikipedia

articles, classic texts, podcast episodes, popular books, video lectures, peer-reviewed papers, Teaching Company courses, and Cliff's Notes. How inefficient! I've since discovered that textbooks are usually the quickest and best way to learn new material. That's what they are designed to be ...

En forma general, el teorema de equipartición indica que cualquier grado de libertad x que participa en la energía total H únicamente como un término cuadrático simple Ax^2 , donde A es una constante, posee una energía promedio $\frac{1}{2}k_B T$ en equilibrio térmico. En este caso el teorema de equipartición puede obtenerse a partir de la función de partición $Z(\beta)$, donde $\beta=1/(k_B T)$ es la ...
