Data mining can unintentionally be misused, and can then produce results that appear to be significant; but which do not actually predict future behavior and cannot be reproduced on a new sample of data and bear little use. Often this results from investigating too many hypotheses and not performing proper statistical hypothesis testing.A simple version of this problem in machine learning is ...

Manning and Scheutze's text provides an excellent introduction to statistical NLP. 19. Statistical approaches give good results in practice simply because, by learning with copious real data, they utilize the most common cases: the more abundant and representative the data, the better they get. They also degrade more gracefully with unfamiliar/erroneous input. This issue's articles make clear ...
