Milling is the process of machining using rotary cutters to remove material by advancing a cutter into a work piece. This may be done varying direction on one or several axes, cutter head speed, and pressure. Milling covers a wide variety of different operations and machines, on scales from small individual parts to large, heavy-duty gang milling operations.

For vertical milling machines, the cutters take a very different form. The cutter teeth cover only a portion of the tool, while the remaining length is a smooth surface, called the shank. The shank is the section of the cutter that is secured inside the collet, for attachment to the spindle. Also, many vertical cutters are designed to cut using both the sides and the bottom of the cutter ...

A milling machine is often simply called a mill. The market offers multiple types of mills: vertical, horizontal, knee, universal, fixed-bed, planner, floor-standing, benchtop, mini, and micro mills. Some of these names are used interchangeably. For example, the terms "mini mill" and a "benchtop mill" are (usually) used to refer to the same thing. Large milling machines designed for ...

How Milling Machines Work. Milling machines can be used on wood, metal, and nearly any other solid object to cut a range of shapes and sizes. They are most often automated by computer numeric control to carve out designs created in a computer-aided design program, but manually operated machines are also still common. Milling machines can be used in both horizontal and vertical orientations, and ...
